## Important Stormwater Management Information

### What we're doing to help!

- ◆ A city ordinance requires strict enforcement of stormwater regulations for building and landscaping contractors.
- ◆ Established a stormwater fund with fees from developers to help build & maintain the storm drain system.
- ◆ Increased fines for unauthorized use of hydrants that could wash debris into the storm drains.
- ◆ Removal of debris from storm drains with a Vactor Rodder truck.
- ◆ Increased street sweeping schedules to remove debris before it gets into the drains.
- ◆ Installed Pet Waste Stations throughout the City to encourage proper disposal of pet waste.
- ◆ Improved monitoring of improper use of leaf blowers that results in debris in our streets and drains.

### You can help too!

1. Read and participate in the "Ways To Keep Our Local Waterways Clean" inside this newsletter.
2. Bring toxic household waste to the Spring **S.T.O.P. event Sunday, April 21, 2013 behind Long Beach City Hall from 8 am-3 pm.** For a list of items included in the program and for a list of other S.T.O.P. dates and locations visit **www.longbeachny.gov**
3. Take part in Earth Day events on April 22, 2013.
4. Participate in the International Coastal Clean-Up Day in September and encourage your neighbors to join you.
5. Don't allow dirt and debris to collect on storm drains.

#### Household Repair and Improvement Tips:

- Before planning an outdoor project, protect the nearest storm drains from debris and other materials.
- Purchase and use nontoxic, biodegradable, recycled and recyclable products whenever possible.
- Clean paint brushes in the sink, not outdoors.
- When using hazardous substances like paints & solvents, use the smallest amount possible; clean up spills immediately.

## STORMWATER MANAGEMENT

### KEEPING OUR WATERWAYS CLEAN

LET'S WORK TOGETHER TO ENSURE THAT  
ONLY RAIN GOES DOWN THE DRAIN!

Dear Neighbors,

As residents of the City of Long Beach, we all appreciate the benefits that our sparkling ocean and pristine beaches offer - and we now know all too well their power. And, while we endeavor to keep these natural treasures free of pollutants, our waterways are vulnerable to contaminants that can taint our drinking water and poison aquatic life. The most threatening of these pollutants is stormwater runoff.

As we've come to know, stormwater runoff is water from rain or melting snow that does not soak into the ground. The water flows over rooftops, paved areas and lawns, picking up debris, household waste and other pollutants and transports them into our waterways. Stormwater runoff is a problem that everyone can play a part in solving, and now, more than ever, it's crucial we do so.

Here are some lessons we have learned. The best way to control stormwater runoff is usually at the source before it is conveyed to surface water. For homeowners, that means good housekeeping, safely storing chemicals, picking up after our pets and properly disposing of all pollutants. These and other simple preventative measures are listed in this newsletter.

We as a City remain steadfast in our commitment to keep water clean and safe. The City's Code of Ordinances established Stormwater Management requirements that comply with those issued by the US EPA (Environmental Protection Agency). Chapter 25, Articles VI and VII of the Code ensures that the City fully enforces the control, reduction and prevention of illicit discharge of stormwater pollutants from land developers, builders, landscapers, residents, businesses and municipal operations. Violations to the Storm Management articles are subject to fines.

Please take a few minutes to read the important information in this newsletter, so that you can be part of the "pollution solution," helping to safeguard our ocean and bays for years to come.

Sincerely,

Scott J. Mandel, City Council President

Scott J. Mandel  
City Council President

#### Where to Get More Information

Log on to the following sites for information on stormwater management:

**NYSDEC-Stormwater Information:** www.dec.ny.gov

**US Environmental Protection Agency:** www.epa.gov/nps

**To report oil or chemical spills:** Call 800-424-8802

### What is stormwater runoff?

Stormwater runoff occurs when precipitation from rain or snowmelt flows over the ground. Impervious surfaces like driveways, sidewalks, and streets prevent stormwater runoff from naturally soaking into the ground.

### Why is stormwater runoff a problem?

Stormwater can pick up debris, chemicals, dirt, and other pollutants and flow into a stormwater sewer system or directly to our coastal waters.

**Anything entering our stormwater sewer system is discharged directly into Reynolds Channel!**

### What are the effects of storm water pollution?

Polluted stormwater runoff can have adverse effects on plants, fish, animals & people.

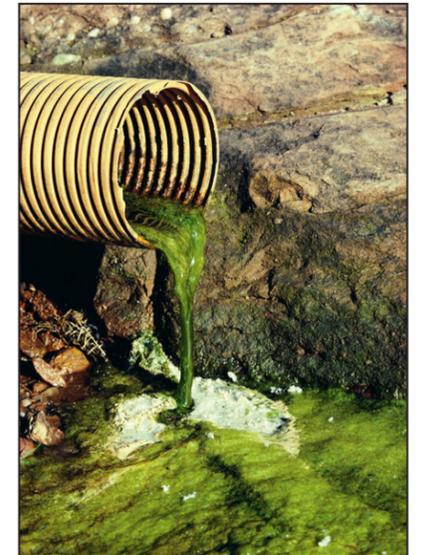

**Sediment** can cloud the water making it difficult for sea life to grow. **Excess nutrients** can cause algae blooms & deplete oxygen, which fish need to survive.

**Bacteria** can wash into swimming areas and create health hazards.

**Debris** washed into waterways can choke, suffocate, or disable aquatic life.

**Household hazardous wastes** like pesticides, paint, used motor oil, and other auto fluids can poison aquatic life. Land animals and people can become sick from eating diseased fish and shellfish or ingesting polluted water.

**Polluted stormwater** often affects drinking water sources. This, in turn, can affect human health and increase drinking water treatment costs.

# Working Together to Keep Our Waterways Clean!

### PET WASTE

When left in the street, pet waste can increase health risks for humans, fish and other wildlife by allowing bacteria and excess nutrients to wash into storm drains and into our canals and bay.

Just one gram of pet waste contains approximately 23 million fecal coliform bacteria which can cause gastrointestinal, ear, eye and throat infections in humans and can suffocate fish and plant life.

Remember to pick up pet waste and then dispose of it properly. Remove waste from the bag and flush it; bag it and throw it in the trash; or use one of the City's Pet Waste Stations.

### DO YOUR PART

Education is essential to changing people's behavior. In addition to "No Dumping - Drains To Bay" markers, we have listed important "pollution solutions" to minimize the contamination of our bays.

Pick up litter. Place your trash in secured receptacles so that it isn't carried into the storm drains. Recycle plastics, glass and paper, and dispose of household chemicals properly.

Clear away dirt and debris from storm drains so they don't enter our waterways.

### GARDENING

Use fertilizers and pesticides sparingly. Don't rake leaves, grass clippings and debris into the street or let them accumulate on sidewalks.

If you apply fertilizer before it rains, much of it will then wash into the storm drains, causing problems for marine life due to the oxygen consuming materials.

You may consider using organic, slow-release fertilizers. Do not over water your lawn and consider using a soaker hose instead of a sprinkler.

### AUTO CARE

Washing your car at home can send detergents and other contaminants into storm drains.

Use soap sparingly; empty your bucket of used soapy water down the sink - not in the street. The best way to wash your car is to take it to a commercial car wash - most reuse wash water.

Don't dump automotive fluids in the gutter or drain. Check your car for leaks and recycle used motor oil. (Visit your local gas station for information.)

### WHERE TO DISPOSE OF HAZARDOUS WASTE AND ELECTRONIC EQUIPMENT

S.T.O.P., a program run by the Town of Hempstead, disposes of household hazardous waste. The program will take place in the parking lot behind Long Beach City Hall on **April 21, 201** from **8am to 3pm**. Log onto [www.longbeachny.org](http://www.longbeachny.org) for a complete list of disposable items. Electronic equipment such as TVs and cell phones can be deposited any time in the "big blue" receptacle in front of the Recreation Center.
